JOB MARKET PAPER

Bank Presence and Health

Featured on the [World Bank Development Impact Blog](#) and [VoxDev](#)

This paper demonstrates that increasing bank presence in underserved areas can substantially improve households' health. I apply a regression discontinuity design to a policy of the Reserve Bank of India. Six years after the policy introduction, treatment districts have 19% more branches than control districts. Households' probability of suffering from a non-chronic disease in a given month is 36% lower. I show evidence that two understudied aspects of banking play a role: banks provide health insurance to households and credit to hospitals. In equilibrium, I observe an increase in health care demand and supply.

WORKING PAPERS

Peer Effects in Deposit Markets

Co-author Naz Koont (Columbia)
Stage [Paper available](#)

We provide first empirical evidence that consumer peer effects matter for banks' deposit demand. Using a novel measure that depicts for each county how exposed peers are to a specific bank in a given year, we tightly identify the causal effect of peer exposure on deposit demand through a fixed effects identification strategy. We address key empirical challenges such as time-invariant homophily. We find that a one percent increase in a bank's peer exposure leads to a 0.05 percent increase in deposit market share. This effect has become stronger over time with the rise of the internet and social media, which facilitate cross-county communication. Peer exposure is especially relevant for smaller banks and customers that have access to the internet.
